**WHAT IS THE PRODUCT?**

**Type:** Mutual fund

**Duration:** The fund has no maturity date. The Fund Management Company has the right to close the fund and redeem the shares.

**Objectives:** The fund is an industry fund with an emphasis on mining companies and a special emphasis on transferable securities whose value development is deemed to be affected by the market development for silver and gold. The fund invests globally without geographical limitation. The fund's assets may be invested in transferable securities, fund units and in an account with a credit institution. With regard to transferable securities and fund units, the fund invests in shares in the mining industry and royalty and streaming companies, as well as in funds and so-called ETFs and ETCs. The manager assesses the value development of all of these to be affected by the market development for silver and gold. The fund aims to exceed its benchmark index over a five-year period. The fund's benchmark index for share class A is Nasdaq PHLX Gold/Silver Sector Total Return (XXAU) in SEK. The fund does not pay dividends. Fund units can normally be purchased or sold on all banking days. The fund's return is determined by how the value of the holdings in which the fund invests increase or decrease during the holding period.

**Target group:** This fund may be suitable for savers who plan to keep their investment for at least five years and who are aware that the money invested in the fund can both increase and decrease in value and that there is no certainty that the entirety of the capital invested can be recovered. No special prior knowledge or experience with mutual funds or financial markets is required in order to invest in the fund.

**Other:** The Depository: Skandinaviska Enskilda Banken AB (publ). The annual report, half-year report, information brochure, latest share values, and other practical information are available free of charge in Swedish at [www.aifmgroup.com](http://www.aifmgroup.com)

**WHAT ARE THE RISKS AND WHAT RETURNS CAN I ACHIEVE?****Risk indicator**

The summative risk indicator provides guidance on the level of risk of this product compared to other products. It shows how likely it is that the product will decrease in value due to market developments. We have classified the product as level 6 out of 7, i.e. the second-highest risk class. This means that the fund has a high risk of increases and falls in the share value. The indicator primarily reflects increases and falls in the shares the fund is invested in. Risks that are not captured by the risk indicator include: Liquidity risk: In the event of extreme circumstances on the stock market, there is a risk of not being able to withdraw money from the fund within the set time. Counterparty risk: The risk of losses due to a counterparty being unable to fulfil its obligations in accordance with the agreed terms, for example not delivering securities or cash and cash equivalents. Operational risks: Delays and errors in processes, political decisions, and government decisions etc. may adversely affect the fund. Currency risk: As the fund invests globally, the value development of each share class is also affected by changes in value between currencies. This product does not include any protection against future market performance. You may therefore lose all or part of your investment.

## WHAT HAPPENS IF THE FUND CANNOT MAKE ANY PAYOUTS?

By law, the fund's assets may not be held by the Fund Management Company. Instead, each fund must have a special depositary that takes care of holding the fund's assets. In the event that the Fund Management Company goes bankrupt, the management of the fund is taken over by the depositary. There is no compensation or guarantee scheme for investors in the fund.
